

OUSSAMA EL OMARI

QA Automation Engineer — Playwright / JavaScript

(202) 713-3971 | oussama.elomarii@gmail.com | linkedin.com/in/oussamaomari

SUMMARY

QA Automation Engineer with 5+ years of experience in Agile SaaS environments. Built Playwright and JavaScript automation frameworks from zero, scaling test coverage from 45% to 85%, compressing release validation from 3 days to under 1 day, and applying AI tooling to multiply QA throughput 10x. Embeds testing across the full delivery pipeline — from requirements review to CI/CD — to enable daily production deployments with measurably fewer post-release incidents.

WORK EXPERIENCE

QA Automation Engineer | Sportendo (Sports Management SaaS) | Remote Sep 2022 – Present

- Built Playwright frameworks (UI, API, mobile) from zero, scaling test coverage from **45% to 85%** — highest in company history.
- Leveraged Cursor AI, Playwright Agents, and Playwright MCP Server to automate test generation and execution workflows, increasing personal output **10x** and eliminating categories of repetitive scripting.
- Integrated automated suites into GitHub Actions CI/CD pipelines, cutting release validation from **3 days to 1 day** and reducing suite flakiness from ~20% to under 5% — together enabling reliable daily deployments.
- Caught 20+ P0/P1 defects pre-production, each preventing an estimated 2–4 hours of incident response and customer-facing downtime.
- Partnered with PMs and engineers to sharpen acceptance criteria upstream, reducing sprint carryover and defect escape rate quarter-over-quarter.

Manual QA Engineer | Reali (Real Estate SaaS) | Remote Dec 2020 – Aug 2022

- Built the regression test suite from scratch, authoring 200+ test cases in Zephyr Scale across core user flows, edge cases, and cross-browser scenarios — establishing the team's first structured regression baseline.
- Validated **30+ features per release** across functional, regression, smoke, and exploratory cycles — zero missed release windows across all sprints.
- Filed detailed defect reports every cycle in Jira with full reproduction steps, environment context, and severity classification — contributing to a **25% reduction** in average resolution time.
- Triaged customer-reported bugs in collaboration with the support team, cutting average time-to-escalation and fast-tracking critical fixes to the engineering backlog.
- Reviewed acceptance criteria before every sprint, catching ambiguities at the source and measurably reducing the volume of bugs that reached QA — fewer mid-sprint surprises, more predictable releases.

TECHNICAL SKILLS

Automation: Playwright, Cypress, JavaScript, TypeScript, GitHub Actions

AI Tools: Cursor AI, Playwright Agents, Playwright MCP Server

Testing: E2E, Regression, Smoke, UAT, Exploratory, API (Postman, Swagger)

Management: Jira, Zephyr Scale, TestRail, Qase.io, Confluence

Databases: MySQL, PostgreSQL | **Debugging:** Charles Proxy

CERTIFICATIONS

Certified Software Tester | LambdaTest Test Automation Professional Certificate | 2025

Test Automation Foundations | Master Test Automation with Playwright | Agile Testing | 2025

Issued via LinkedIn Learning & LambdaTest

EDUCATION

Bachelor of Arts, English Linguistics | University of Sidi Mohammed Ben Abdellah | Fes, Morocco | 2019

High School Diploma, Major in Economics | CEGEP High School | Fes, Morocco | 2015

LANGUAGES

English | Arabic | French | Spanish | Turkish
